

Definition

It is a statistical measure that quantifies the ratio or percentage of students belonging to the Other Backward Classes category who are enrolled in higher secondary education, compared to the total number of students enrolled at that level.

Method of computation

Proportion of OBC Enrollment = $\left(\frac{\text{Total Enrollment at Higher Secondary Level Number of OBC Children Enrolled in Higher Secondary Education}}{\text{Total Enrollment at Higher Secondary Level}}\right) \times 100\%$
