DFA Resources

Online Resource Library

The Online Resource Library is a digital knowledge library that contains technical and programmatic documents related to the Data For All Initiative. The Online Resource Library also serves as an active demonstration environment of a resource library that could be deployed in any context. To learn more, contact DFA.

Product Profile - DFA Monitoring

This is a comprehensive document that details all the relevant aspects of the DFA Monitoring. The product features, technology stack and example of implementations have all been listed.

DFA Resources is an online dynamic knowledge hub that can easily be managed by the programme team with no technical know-how required.

It allows an easy search of resources (PDF, Video, Audio, PPT etc) through an intelligent filter mechanism as well as an intuitive search bar.

Why use DFA Resources?

This module is highly configurable and can be adapted to all taxonomy needs of a project and an organisation. It is a nicely presented knowledge library for ease of search of key resources that one may want to make available in a centralised way.

Implementations

► Regional: ESARO, ILO Fair Recruitment, FHM Engage

► National: Algeria, Egypt; Jamaica; Malawi, Togo, Tunisia,
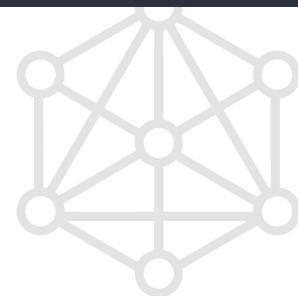

Features

▶ **Easy management of resources** The DFA Resources comes with an admin panel through which the management of the resources can be done in a real time and dynamic manner.

▶ **Custom taxonomy** The strength of the resource library is how well the resources are classified. Users can define their own taxonomies in the admin panel.

▶ **Search**. An open search bar is also available to allow users to search a resource by key word.

▶ **Type of resource.** Various types of resources can be added to the resource library - PDF, PPT, Video, Audio, etc.

▶ **Accessibility features**. Resources in the library can be widely shared by email, WhatsApp, Facebook etc. They can also either be downloaded or viewed.

▶ **Publishing option**. When the administrator adds a resource in the library, he can decide to publish it or not. This means that the uploading of resources can be done by a team and then reviewed and published by the administrator.
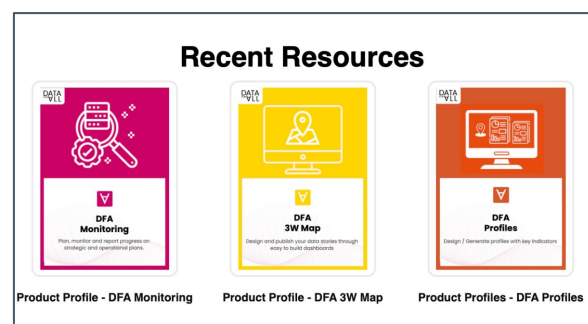

Key Outputs

Intuitive Filters

User-defined filters can be implemented based on the taxonomies defined for the classification of the resources. Searching for resources becomes easier.
