# DFA Dashboard

Design your interactive data story

> An intuitive tool to design and develop your own no-code dashboard. Drag and drop your visualisations and bring your data story to life with this tool loaded with intuitive features. Create as many user accounts and let your team members develop their dashboards based on program needs.

Key features

Built-in library of visualizations

A vast range of built-in visualization/chart types for users to use in their dashboard design.

Dynamic connection to a data warehouse

Connect a dashboard dynamically to a data warehouse and use the information from there to populate charts in real time.

User management

Add multiple users, who will each have their own library of dashboards that are accessible only to them.

HTML editor

For those users who would like to take the design to the next level and enhance the aesthetics, the application offers an HTML editor.

Customised Header and Footer

Design a template of header and footer for a dashboard. The same template can be used in multiple dashboards.
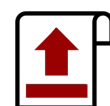

Built in image library and media folder

An in-built media library hosting more than 500+ icons. Alternatively, users have the option to upload their own images/icons and media files to be used in the dashboard design.

Language support

Supports multiple languages if the data warehouse has more than one language.

Preview, Publish and Unpublish modes

Use the preview mode to inspect/review the progress made while designing, and publish the dashboard for public sharing or unpublish it in case you want to restrict its access.
