DFA Survey comes as an integrated solution composed of a web platform managing the mobile app, an indicator data warehouse and a suite of analytical tools.

Key Features

Custom surveys
Web based module to design custom surveys based on programme or project requirements.

Data validation
Set up data validation rules to specific questions to ensure quality data capture.

User management
Define roles and create users like reviewers, enumerators with defined permissions.

Offline data capture
Collect data even without internet connection.

Data Review
Validate the responses sent by the enumerators. Responses can be approved or rejected.

Notifications
In-built mobile app notifications to trace the actions of the users and their responses.

Operational dashboard & Reports
Dashboard and reports to provide more transparency to the operationalisation of data collection.

Indicator data warehouse
Publish the data to an indicator data warehouse for further analysis.
