

# DFA Data Manager

Manage indicators, dimensions and metadata; decentralise data entry; and take control of your data warehouse – on and offline.

## Key Features

### Online management of data warehouse

Online management of indicator data warehouse connected to various analytic tools.

### Indicator Management

Management of indicators aligned to program needs, associated with SDGs, themes etc.

### Unlimited disaggregations

Indicators can be disaggregated by sex, age group, location, etc.

### Metadata Management

Association of metadata with indicators through user defined categories.

### User Management

Decentralised data management through creation of users with various roles and permissions.

### Multilingual

Data warehouse can be developed in any language.

### Offline data management

Features that allow offline management of data warehouse and data entry.
